Glyph Ascent - How to Play

Goal

Climb 12 floors of the Rune Spire with a deck of glyph cards and break The Crowned Eye on the top floor. If you fall, the embers you earned go to the Rune Forge and make your next climb stronger.

Your turn

You get 3 energy and draw 5 cards each turn. The number in the orange circle is a card's energy cost. **Tap a card** to raise it, then **tap it again** or tap a foe to play it. With several foes, tap one to target it (pink outline). Press **End Turn** when you are done; unused cards go to the discard pile and block wears off.

Desktop: number keys 1-9 pick and play cards, Tab switches target, E or Enter ends the turn.

Read the intents

Above every foe is what it will do next turn: a red sword with the damage it will deal, Guard (it gains block), Empower (it gains strength) or Curse (makes you Weak and Vulnerable). Block enough to cover incoming damage before you attack.

Effects

Block soaks damage this turn. **Vulnerable** takes 50% more damage. **Weak** deals 25% less. **Poison** hurts at end of turn, then drops by 1. **Strength** adds to every hit. **Thorns** hurts attackers. Powers last the whole fight.

The climb

Each floor offers 2 paths: Battle, Elite (tougher, more gold, +5 max HP), Rest (heal 35% or remove a card) and Shop (buy glyphs or remove a card). After every win you heal 6, gain gold and embers, and may add one of 3 new glyphs. Thin decks draw your best cards more often.

Rune Forge

On the title screen, spend embers on Vitality (+6 max HP), Might (+1 Strength each fight), Insight (+1 card on turn 1) and Fortune (+25 starting gold). Progress saves on your device.

Tips

Rune Bash then Meteor is huge. Poison and Thorns win long elite fights. Skip weak cards; a small deck is a strong deck.
