Salvage Drop - How to Play

Goal

Drop onto a hostile moon with three squad bots (Rook, Vega, Juno). Destroy all 3 red hive nests, secure both blue data cores, then call the dropship from the green landing zone (LZ), survive 60 seconds, and be on the pad when it lands.

Controls (phone)

Move: drag anywhere on the left half of the screen - a virtual joystick appears under your thumb.

Aim and fire: drag on the right half. Let go and your rifle auto-fires at the nearest threat.

Shock Pulse: damages and knocks back everything near you and gives 1 second of invulnerability (9 s cooldown).

Orbital Strike: a huge blast 1.3 s after calling it, aimed where your right thumb points (or at the nearest enemy). It also hurts your squad, so stay out of the orange ring.

Call Ship: appears only when all objectives are done and you stand on the LZ.

Desktop: WASD/arrows move, mouse aims, Q/Space pulse, E strike, F call ship. II button pauses.

Objectives

Nests spawn bugs while you are near. Shoot them or drop a strike on them.

Data cores: stand inside the ring to download. Squadmates inside speed it up; bugs swarm while it runs. Leaving slowly drains progress.

Caches (orange boxes) burst into salvage when you walk over them.

Enemies

Crawlers: fast melee swarmers. Spitters: keep distance and shoot acid. Brutes: slow tanks that appear at high threat.

Threat rises over time, with every nest destroyed, during the extraction hold, and with each previous win.

Falling and losing

If you go down, a nearby squadmate revives you in 3 s (2 revives per mission). Downed bots return as reinforcements after 20 s.

You lose if you stay down 14 s, run out of revives, your whole squad is down, or the dropship leaves without you. Losing keeps 25% of your salvage; winning banks all of it plus an objective bonus.

Armory

Spend salvage on Armor Plating, Rifle Calibration, Auto-Loader, Orbital Uplink, Squad Training and Salvage Magnet. Progress saves on the device.

Tips

Fight near your squad - bots focus what threatens you.

Save the strike for nests and big swarms on the cores.

Clear the area around the LZ before calling the ship.
