Raid Forge — How to Play

Goal

Raid 20 neon fortresses in a row. Each raid lasts 90 seconds. Earn stars: 1 for destroying 50% of the base, 1 for destroying the Core, and 1 for 100%. Any star unlocks the next fortress.

Controls (phone)

Pick a troop on the bottom bar, then tap inside the glowing green zone at the bottom of the map to drop it. Hold your finger down to keep dropping troops.

Tap an enemy defense to see its range circle before you attack.

Your remaining army is shown top left, destruction % and stars in the middle, time on the right.

Troops

Brute (cost 1): tough melee, hits the nearest building.

Archer (cost 1): fragile, attacks from 3 tiles away, even over walls.

Ram (cost 3): huge health, goes straight for defenses.

Sapper (cost 2): runs to the nearest wall and blows it open, also damaging buildings nearby.

Troops that hit a wall on their way will attack that wall, so use Sappers to open a path first.

Defenses

Cannon: heavy single shots at short range. **Spire**: fast long-range bolts. **Mortar** (base 4+): long-range splash, but cannot hit troops right next to it. **Tesla** (base 7+): lightning that chains to 3 troops.

Bases get stronger every level, add walls from base 2 and extra wall pockets from base 9.

Gold and the Armory

Destroying Vaults and Drills pays gold, and every star pays a bonus. Spend gold in the Armory from the map: +15% health and damage per level for each troop type, or War camp for +3 army capacity. Each upgrade has 10 levels. Progress, gold and best stars save automatically.

Tips

Spread your troops out. Mortars and Teslas punish tight clumps.

Drop Rams first to soak damage, then Brutes and Archers behind them.

Replay earlier bases for 3 stars to farm gold when you get stuck.
