Cog Works - How to Play

Goal

Build a neon factory on a 12x16 grid. Mine ore, smelt it into plates, assemble gears and circuits, and sell everything for cash. Complete 6 goals (each pays a growing bonus), then keep raising your income per second.

Controls (phone)

Tap a part in the bottom bar, then tap a grid tile to build it.

The arrow button sets which way new parts face. Tap a placed part with the same tool to rotate it.

With the Belt tool, drag your finger to draw a conveyor line. Each belt turns to follow your finger.

Remove refunds 50% of the cost. ? opens help (pauses the game); the note button toggles music.

Desktop: keys 1-5 pick parts, X picks Remove, R rotates.

Parts

Belt ($2): moves one item at a time in its direction.

Miner ($30): only on ore patches (blue = iron, orange = copper). Produces one ore every 1.2 s.

Smelter ($60): ore to plate in 1.6 s.

Assembler ($150): 2 iron plates to 1 gear (2.4 s), or 1 iron plate + 2 copper plates to 1 circuit (3.2 s). It makes circuits whenever it has the parts for one.

Seller ($40): buys anything delivered to it. Ore $1, plates $4, gears $10, circuits $28.

Getting started

Put a Miner on iron ore facing right, a Smelter right of it facing right, then a Seller. That first line finishes Goal 1 in about 20 seconds.

For circuits: build an iron line and a copper line that both feed one Assembler, with belts if needed, and point the Assembler at a Seller.

Tips

Buildings push items only in the direction they face, so check the white arrows.

A full building stops accepting items and the belt behind it backs up. Add more Sellers or Smelters to clear jams.

The factory auto-saves every 5 seconds and whenever you build. Use Continue Factory to pick up where you left off.
