# Lane Lords — How to Play

## Goal

Destroy the enemy Core (top-right, red) before they destroy yours (bottom-left, blue). Three lanes connect the bases; each lane has two towers per side.

## Controls (phone)

**Move:** touch and drag anywhere on the left 60% of the screen — a virtual joystick appears under your thumb.

**ATK:** hold the big red button to auto-attack the nearest enemy in range.

**Q / W / E:** abilities. They auto-aim at the nearest enemy; while you hold the joystick they fire in the direction you are moving.

**Base:** 3-second recall to your base (cancelled if you move). **Shop:** only works inside the blue ring of your base.

Keyboard (desktop): arrows to move, Space attack, Q/W/E abilities.

## Heroes

**Vex** (ranged blaster): Bolt skillshot, Blink, Storm area blast.

**Brakk** (bruiser tank): Hook pulls an enemy to you, Charge dashes and damages nearby enemies, then grants 40% damage reduction, Quake area slam.

**Nyra** (assassin): piercing Shuriken, Shadowstep (+30% speed, +60% attack damage), Frenzy area slash.

## Rules of the lane

Minion waves spawn every 25 seconds; every third wave includes a big minion. After 8 minutes, Overdrive makes minions grow stronger every wave so matches always finish.

Towers and Cores take only 35% damage from heroes unless your minions are inside the tower range — push with your wave.

Towers prioritise minions but switch to any hero who attacks an enemy hero under them.

Kills and last hits give gold and XP. Level up to 12: more HP and damage each level, and abilities scale with level.

Dead heroes respawn after 6s + 1.5s per level.

## Shop

Edge Shard +12 dmg (300) · Core Plate +180 HP (300) · Pulse Boots +25 speed (250) · Overclock +15% attack speed (400) · Vamp Chip 12% lifesteal (450) · Focus Lens -15% cooldowns (500).

## Tips

Stand behind your minions. Recall when low — your base heals you fast. Save E for team fights or to clear a wave under an enemy tower.
