Prism Bastion — How to Play

Goal

Neon raiders march down the glowing light-road toward your crystal core. Build towers on the dark tiles beside the road and survive all 30 waves. Every raider that reaches the core costs lives (1 for most, 2 for tanks, 5 for bosses). You start with 20 lives and 140 crystals.

Controls (phone)

Tap a tower button on the bottom bar to select it, then tap any dark tile to build it there. You cannot build on the road.

Tap a tower you already built to open its panel: see its damage, range and kills, **Upgrade** it (up to level 3) or **Sell** it for 70% of what you spent.

■ **Start / Wave** sends the next wave. You can build and upgrade between waves and during them. **1x/2x/3x** changes game speed.

Towers

Pulse (50): fast single shots, good all-rounder.

Lance (90): very long range and ignores armor; your answer to tanks and bosses.

Frost (70): pulses every raider in range, dealing light damage and slowing them.

Nova (120): explosive shots that splash nearby raiders; great against swarms.

Upgrades cost 80% then 160% of the base price. Each level adds about 75% damage, more range and faster fire.

Raiders

Drones (green): basic. **Runners** (yellow): fast and fragile. **Swarms** (purple): tiny and numerous. **Tanks** (orange squares): slow and armored, so weak shots barely scratch them. **Bosses** (red stars) arrive on waves 10, 20 and 30.

Armor removes a flat amount from each hit, so many small shots do little to tanks. Lance ignores armor completely.

Economy and score

Each raider destroyed pays crystals. Clearing a wave pays a bonus that grows every wave. After each wave a toast tells you which raiders are coming next.

Score comes from kills and wave bonuses, plus 500 per life left if you win. Your best score is saved. The game auto-saves between waves, so you can close it and tap Continue later.

Tips

Put early Pulses on the inside corners of the road, where one tower covers two or three lanes.

Add a Frost near the start of a long stretch so everything behind it slows down.

Before wave 10, have at least one Lance. Upgrade a few towers fully rather than spreading many level-1 towers.
